

Syndromic Multiplexes* for Urinary Tract Infections Sexually Transmitted Infections Antimicrobial Resistance

BioGX
Molecular Made Easy

Molecular PCR Test vs. Urine Culture

Urine culture has long been a valuable diagnostic tool for urinary tract and sexually transmitted infections. Molecular techniques like PCR offer several advantages to traditional culture:

- On-site Testing
- Same-day Results
- Accurate Detection
- Comprehensive Pathogen Detection
- Antibiotic Resistance Determinants

BioGX real-time PCR reagents for UTI/STI/AMR are offered lyophilized in a variety of multiplex configurations to afford flexible workflow adoption by laboratories as per their testing needs. BioGX reagents have compatibility with open platforms including BD MAX™, ABI QuantStudio™, ABI 7500 Fast Dx, Bio-RAD CFX Touch™ and the BioGX pixl™. The multiplexes* are ready to be validated to run together with universal cycling conditions on a platform of choice.

BioGX UTI/STI/AMR Syndromic Multiplexes*

MULTI-PLATFORM COMPATIBILITY

Reagent configurations compatible with common open-system real-time PCR platforms

COST EFFECTIVE AND FAST

Lyophilized and optimized reagent formats that support rapid validation and simple routine use

SIMPLE WORKFLOW

Easy-to-Use, Sample-to-Result application saves your lab time and money

MODULAR REAGENT FORMATS

Multiple reagent configurations that support flexibility in identifying anywhere from 3 to 30+ pathogens

Platform	Product Name	Targets	Reactions per kit	Part No.
BD MAX™	vanA, vanB, vanC1/C2/3	vanA, vanB, vanC1/C2/3, SPC	24	450-016-C-MAX
